AASHISH ACE

SENIOR SOFTWARE ENGINEER | FULL-STACK & MOBILE

Bengaluru, India | Open to global remote roles | +91 75032 94187

ashishace007@gmail.com | linkedin.com/in/aashishace | github.com/aashishace

PROFILE

Senior software engineer building full-stack platforms and mobile applications across business messaging, commerce, field operations and learning. Currently Director & Developer at QwickPing, combining product direction with hands-on engineering. Experience with tenant-aware workflows, authentication, billing integrations, offline media capture and API-driven systems.

TECHNICAL SKILLS

Web & backend: TypeScript, JavaScript, React, Next.js, Node.js, REST APIs, webhooks, Supabase Edge Functions

Mobile: Kotlin, Java, Jetpack Compose, React Native, Expo, Flutter/Dart, Android SDK, Room, CameraX

Data & access: Supabase/PostgreSQL, Firebase Auth, Firestore, Storage, row-level security, organization-scoped data

Delivery & integrations: Git/GitHub, GitHub Actions, Vercel, AWS S3/SES, Meta WhatsApp Cloud API, Razorpay, Twilio

PROFESSIONAL EXPERIENCE

Director & Developer 2025 - Present

QwickPing

- Lead product direction and hands-on development of a business messaging platform using Next.js, TypeScript and Supabase.
- Build organization and team workflows, contact imports, templates, campaign queues, shared conversations and API integrations.
- Implement Meta WhatsApp integration and Razorpay subscription billing, including payment-signature verification and webhook processing.

Independent Software Engineer 2025 - Present

Client and product development | Remote

- Deliver mobile and web products across requirements, implementation, provider integrations, deployment and ongoing support for clients in India, the UAE and Australia.

Senior Full-Stack Software Engineer 2023 - 2025

Directi Internet Solutions Pvt Ltd

- Developed frontend and backend features, connecting web interfaces with backend services.
- Contributed to microservices development and API integration across application components.

Android Developer Sep 2021 - May 2022

Intellisense Technology | Jalandhar, India

- Developed Android features for iGate and Saksham Fitness, including mobile UI, API integration, authentication, bug fixes and release support using Kotlin/Java and Firebase.

Android App Developer 2016 - 2019

Geton Infotech (now Dial ERP Technologies) | India

- Contributed to early Android versions of Beat Plan, Payroll Trail, White Bills Pro and CRM products; published multiple applications to Google Play.
- Built field-force, attendance, GPS coverage, billing, payment-pickup and lead-management workflows for business users.

AASHISH ACE

Selected work and technical scope

SELECTED PROJECTS

FieldProof

React PWA | Firebase | IndexedDB | Cloud Functions

- Built installation-job workflows with guided photo/video/report collection, per-fan evidence grouping and office/reviewer access.
- Implemented device-local originals, upload recovery, server-side media checks and per-fan ZIP exports for work in unreliable connectivity.

Oneo Sports

React | TypeScript | Supabase | Edge Functions

- Collaborated on a sportswear storefront and team-roster platform covering player names, numbers, sizes, design/fabric choices and spreadsheet exports.
- Improved pricing and checkout behavior, administration, mobile usability and performance through lazy-loaded pages and public-response caching.

Angrezistan

React Native | Expo | TypeScript | Firebase

- Developed an English-learning application with lessons, interactive practice, audio/video content, homework and learner progress workflows.
- Implemented content and game-session services, progress persistence and gamification through rewards and activity-based progression.

SandeshX

React | Supabase | WhatsApp API | AWS SES | Twilio

- Built legal-notice workflows around spreadsheet imports, PDF generation, cloud storage and multichannel communication.
- Connected WhatsApp, email and SMS provider endpoints with delivery-status workflows and shared server-side authorization.

ADDITIONAL TECHNICAL WORK

I Said I Would: Native Android application in development using Kotlin, Compose, Room and CameraX. Implements local voice promises, hashed barcode matching, alarm-permission fallback and boot/time-change recovery.

VR classroom control: Built a Windows host/player interface for offline 360-degree video playback across 15 Meta Quest 2 headsets, including local-network commands and APK deployment.

EDUCATION

Master of Science (M.Sc.) in Information Technology
